STEP 1 OF 5

Connected

Device connected to Base Station A

1. Connected | 2. Moving | 3. Handoff Initiated | 4. Switching | 5. Handoff Complete

Start Simulation | Pause | Reset | Next Step

Simulation interval: **1.8 seconds**

Handoff event log

LIVE EVENTS

1 Connected Current stage	2 Moving Pending	3 Handoff Initiated Pending	4 Switching Pending	5 Handoff Complete Pending

Why is handoff necessary?

As a mobile device moves, its serving cell's signal weakens. The network continuously measures neighboring cells and transfers the active connection to a stronger base station, maintaining call and data continuity without interruption.
